

Laser cutting project explanation:

For my project, I chose to get a stencil of a face drawn with one line and took this stencil to put it in illustrator and cut it into mirrored acrylic material. I chose mirrored acrylic as I wanted the idea to be that when someone looked into it they would see their face kind of shaped by this stencil reflected back to them. I also chose to do this in one line as I wanted to keep the laser cutter constant making sure it never turned off and was on a constant stream.
